

**Dr. Somia Iqtadar** is a distinguished physician and educator, holding fellowships from the College of Physicians and Surgeons Pakistan and the Royal College of Physicians London. She serves as an Associate Professor of Medicine at King Edward Medical University (KEMU), Lahore Pakistan. A leading expert in dengue management, Dr. Somia has played pivotal roles as Secretary and Chairperson of the Dengue Expert Advisory Group (DEAG), where she has been instrumental in shaping dengue prevention and control strategies in Pakistan. As the founder Secretary General of the Pakistan Society of Internal Medicine (PSIM), her leadership has significantly influenced public health policies and practices in internal medicine. Furthermore, as a WHO Master Trainer on the clinical management of dengue fever, an Advisor to the Eastern Mediterranean Regional Office on arboviral diseases, and a member of the Dengue Advisory Group of the International Society of Neglected Tropical Diseases, she brings her extensive experience to the global stage, contributing to international efforts against dengue. Dr. Somia has made substantial contributions to the academic community, authoring over 60 research papers published in high-impact national and international journals. Her work includes authoring the Dengue GCP Guidelines, Dengue Guidelines in Pregnancy, and SOPs for Dengue Prevention. She has also contributed to renowned medical textbooks, including Kumar and Clark's Textbook of Medicine and the McMaster Textbook of Medicine. Her exceptional contributions have been recognized with several prestigious awards, including the Governor's Award for Extraordinary Contributions to Health, the Presidential Award of Excellence for Diabetes Care, the Charles Wallace Fellowship from the UK, with an attachment at Oxford University, and the Health Icon Award 2024. Globally acknowledged, she was nominated among the Top 100 Women in Global Health (WGH) Pakistan Chapter. In addition to her academic and clinical achievements, Dr. Somia is an active member of the Asia Dengue Voice and Action (ADVA) group and has been a sought-after speaker at numerous international conferences on dengue and related topics. Her work continues to influence both national and international efforts in combating dengue and advancing the field of internal medicine.
